# Issue Board

Please use the GitHub issue board for all questions that can be shared with other students

Active participation highly encouraged: help out others!

Do NOT close your issues so that other students can find them easily

# #0 Compiling the Kernel & Running the emulator

## Information

OS (kernel): Tizen 5.0

Emulator: QEMU

## Environment

**Native Ubuntu : Strongly Recommended-!!!**

Virtual Machines

Building process is typically much faster when using more than one core

List of possible hypervisors

- VirtualBox
- VMware (not tested)
- Parallels (not tested)

# #0 Compiling the Kernel & Running the emulator

•Steps (more details at <https://github.com/ijsilver/osfall2021/blob/main/doc/Project0.md>)

- 1.Download the Tizen kernel source code.
- 2.Build the kernel and make the booting image.
- 3.Install and configure the emulator.
- 4.Run the emulator and upload the related screenshots on etl.

# #1 Overview

- Write a system call

- `int ptree(struct prinfo *buf, int *nr)`
- System call number **398**
- You can name your function `sys_ptree`; doesn't matter as long as it works

- Test your system call

- Print the entire process tree in pre-order

- Reference

Details + help document will be announced soon on <https://github.com/ijsilver/osfall2021>
